### **Sandy Brown Associates/Shen Milsom & Wilke Form Partnership**

*Firms combine complementary audiovisual/multimedia and acoustics skills and expertise in international markets to benefit architects and other clients.*

With more than 50 years of collective experience in audiovisual/multimedia, information technology/telecommunications, building security, and acoustics, Sandy Brown Associates and Shen Milsom & Wilke are joining forces to provide architects, building owners, and other clients with integrated services in the United Kingdom, Europe, and the United States. The firms will work together on a wide range of building types, including commercial, corporate, transportation, government, healthcare, education, and museums and galleries.

The partnership, announced Nov. 18, 2003, is effective immediately.

The companies are currently working together to provide acoustics and audiovisual/multimedia design services for the Corporate Executive Board (CEB), an education and support firm for senior executives, at Victoria House in London. Shen Milsom & Wilke's Washington, D.C., office is also working with CEB on a project in the capital.

Sandy Brown Associates, opened in 1969 by the late Sandy Brown and David Binns, has offices in London and Edinburgh. The firm's reputation was originally based on Mr. Brown's skillful acoustic design of commercial sound recording studios for such musicians as Cream, Eric Clapton, and the Rolling Stones. Today the company provides coordinated design of acoustics and audiovisual technology from initial system design to final installation and commissioning.

Shen Milsom & Wilke, founded in 1986, is based in New York City and has 11 offices around the world--including a London location which opened a year ago. They bring extensive experience in digital media technology. While the firm offers design and consulting services in four disciplines--multimedia/audiovisual, information technology/telecommunications, building security, and acoustics--Shen Milsom & Wilke's ability to integrate these areas of expertise makes them unique.
